Work Experience

Senior Software Engineer

OPS Controls - Carey, OH | Jan. 2017 - Current

Assisted in leading project & solution design, full-stack software development, and implementation of software applications within the wireless remote controls, heavy equipment, hydraulic, and controls system industries.

I have successfully proven to lead and deliver large-scale collaborative projects with industry-leading OEMs such as Cummins, Vermeer Corporation, and Link-Belt Cranes.

Job Duties:

- Oversaw, developed, and integrated modular software applications using IEC 61131-3, C, & C++
- Developed new & revamped legacy UI/UX design
- Helped troubleshoot, rework, and upgrade legacy software systems written by external engineering departments for industry-leading large-scale OEMs
- Improved and optimized internal processes to identify core system requirements and solutions
- Led the creation of several libraries now considered company-standard across strategic partner groups

Key Achievements:

- Led and secured strategic partnerships with external engineering departments within large-scale OEMs
- Developed company growth and customer demand for my department in critical business ventures
- Worked closely with product vendors to develop hardware that critically filled industry demands

Junior Software Engineer

University of Findlay - Findlay, OH | Jan. - Dec. 2016

Assisted in product design and development of end-user resource and management solutions. Successfully implemented a web-based app for a well-established professor at the institution. Application addressed and fixed efficiency issues in group work and attendance.

Key Achievements:

- Provided user requirement analysis, drafted initial software requirements specification (SRS), created front-end UI and provided further agile software development principles for early and continuous delivery of the web application used by staff
- Rewarded during UoF symposium due to high end-user satisfaction of product during its lifecycle
